

# U.S. ENVIRONMENTAL PROTECTION AGENCY SPCC FIELD INSPECTION AND PLAN REVIEW CHECKLIST

### ONSHORE OIL DRILLING, PRODUCTION AND WORKOVER FACILITIES

### **Overview of the Checklist**

This checklist is designed to assist EPA inspectors in conducting a thorough and nationally consistent inspection of a facility's compliance with the Spill Prevention, Control, and Countermeasure (SPCC) rule at 40 CFR part 112. It is a required tool to help federal inspectors (or their contractors) record observations for the site inspection and review of the SPCC Plan. While the checklist is meant to be comprehensive, the inspector should always refer to the SPCC rule in its entirety, the SPCC Regional Inspector Guidance Document, and other relevant guidance for evaluating compliance. This checklist must be completed in order for an inspection to count toward an agency measure (i.e., OEM inspection measures or GPRA). The completed checklist and supporting documentation (i.e. photo logs or additional notes) serve as the inspection report.

This checklist addresses requirements for onshore oil drilling, production and workover facilities (including Tier II Qualified Facilities that meet the eligibility criteria set forth in §112.3(g)(2)). Qualified facilities must meet the rule requirements in §112.6 and other applicable sections specified in §112.6, except for deviations that provide environmental equivalence and secondary containment impracticability determinations as allowed under §112.6.

Separate and standalone checklists address the requirements for:

All other onshore facilities including Tier II Qualified Facilities (i.e., those facilities not involved in oil drilling, production and workover activities);

Offshore oil drilling, production and workover facilities; and

Tier I Qualified Facilities (for facilities that meet the eligibility criteria defined in §112.3(g)(1)).

The checklist is organized according to the SPCC rule. Each item in the checklist identifies the relevant section and paragraph in 40 CFR part 112 where that requirement is stated.

- Sections 112.1 through 112.5 specify the applicability of the rule and requirements for the preparation, implementation, and amendment of SPCC Plans. For these sections, the checklist includes data fields to be completed, as well as several questions with "yes," "no" "NA" answers.
- Section 112.6 includes requirements for qualified facilities. These provisions are addressed in Attachment D.
- Section 112.7 includes general requirements that apply to all facilities (unless otherwise excluded).
- Section 112.9 specifies spill prevention, control, and countermeasures requirements for onshore oil drilling, production and workover facilities
- Section 112.10 specifies spill prevention, control, and countermeasures requirements for onshore oil drilling, production and workover facilities.

The inspector needs to evaluate whether the requirement is addressed adequately or inadequately in the SPCC Plan and whether it is implemented adequately in the field (either by field observation or record review). For the SPCC Plan and implementation in the field, if a requirement is addressed adequately, mark the "Yes" box in the appropriate column. If a requirement is not addressed adequately, mark the "No" box. If a requirement does not apply to the particular facility or the question asked is not appropriate for the facility, mark as "NA". Discrepancies or descriptions of inspector interpretation of "No" vs. "NA" may be documented in the comments box subsequent to each section. If a provision of the rule applies only to the SPCC Plan, the "Field" column is shaded.

Space is provided throughout the checklist to record comments. Additional space is available as Attachment E at the end of the checklist. Comments should remain factual and support the evaluation of compliance.

#### Attachments

- Attachment A is for recording information about containers and other locations at the facility that require secondary containment.
- Attachment B is a checklist for documentation of the tests and inspections the facility operator is required to keep with the SPCC Plan.
- Attachment C is a checklist for oil spill contingency plans following 40 CFR 109. Unless a facility has submitted a
  Facility Response Plan (FRP) under 40 CFR 112.20, a contingency plan following 40 CFR 109 is required if a facility
  determines that secondary containment is impracticable as provided in 40 CFR 112.7(d). The same requirement for
  an oil spill contingency plan applies to the owner or operator of a facility with qualified oil-filled operational equipment
  that chooses to implement alternative requirements instead of general secondary containment requirements as
  provided in 40 CFR 112.7(k).
- Attachment D is a checklist for Tier II Qualified Facilities.
- Attachment E is for recording additional comments or notes.
- Attachment F is for recording information about photos.

SPCC GENERAL APPLICABILITY—40 CFR 112.1					
IS THE FACILITY REGULATED UNDER 40 CFR part 112?  The completely buried oil storage capacity is over 42 000 U.S. gallons. <b>OR</b> the aggregate aboveground oil.  Yes  No					
storage capacity is over 1,320 U.S. gallons AND					
The facility is a non-transportation-related facility engaged in drilling, producing, gathering, storing, processing, refining, transferring, distributing, using, or consuming oil and oil products, which due to its location could reasonably be expected to discharge oil into or upon the navigable waters of the United States					
AFFECTED WATERWAY(S): LOS ANGELES RIVER	DISTANCE: APROX. 3 MILES				
FLOW PATH TO WATERWAY: STORM DRAINS					
Note: The following storage capacity is not considered in determining applicability	y of SPCC requirements:				
· Equipment subject to the authority of the U.S. Department of	· Containers smaller than 55 U.S. gallons;				
Transportation, U.S. Department of the Interior, or Minerals Management Service, as defined in Memoranda of Understanding dated November 24, 1971, and November 8, 1993; Tank trucks that return to an otherwise	<ul> <li>Permanently closed containers (as defined in §112.2);</li> <li>Motive power containers (as defined in §112.2);</li> </ul>				
regulated facility that contain only residual amounts of oil (EPA Policy letter)	· Hot-mix asphalt or any hot-mix asphalt containers;				
Completely buried tanks subject to all the technical requirements of 40 CFR part 280 or a state program approved under 40 CFR part 281;	· Heating oil containers used solely at a single-family residence;				
· Underground oil storage tanks deferred under 40 CFR part 280 that	· Pesticide application equipment and related mix containers;				
supply emergency diesel generators at a nuclear power generation facility licensed by the Nuclear Regulatory Commission (NRC) and subject to any NRC provision regarding design and quality criteria, including but not limited to CFR part 50;	Any milk and milk product container and associated piping and appurtenances; and     Intra-facility gathering lines subject to the regulatory requirements				
Any facility or part thereof used exclusively for wastewater treatment (production, recovery or recycling of oil is not considered wastewater treatment); (This does not include other oil containers located at a wastewater treatment facility, such as generator tanks or transformers)	of 49 CFR part 192 or 195.				
Does the facility have an SPCC Plan?	✓ Yes □ No				
FACILITY RESPONSE PLAN (FRP) APPLICABILITY—40 CFR	112.20(f)				
A non-transportation related onshore facility is required to prepare and in	mplement an FRP as outlined in 40 CFR 112.20 if:				
☐ The facility transfers oil over water to or from vessels and has a 42,000 U.S. gallons, <u>OR</u>	total oil storage capacity greater than or equal to				
☐ The facility has a total oil storage capacity of at least 1 million U	.S. gallons, AND at least one of the following is true:				
The facility does not have secondary containment sufficier plus sufficient freeboard for precipitation.	ntly large to contain the capacity of the largest aboveground tank				
☐ The facility is located at a distance such that a discharge of	could cause injury to fish and wildlife and sensitive environments.				
The facility is located such that a discharge would shut do	wn a public drinking water intake.				
lacksquare The facility has had a reportable discharge greater than or	equal to 10,000 U.S. gallons in the past 5 years.				
Facility has FRP: ☐ Yes ☐ No ☑ NA	FRP Number:				
Facility has a completed and signed copy of Appendix C, Attachment C- "Certification of the Applicability of the Substantial Harm Criteria."	-II, ✓ Yes □ No				
Comments: SIGNED BY TIM PARKER

112.3(e)(1)	Plan is available onsite if attended at least 4 hours per day. If facility is unattended, Plan is available at the nearest field office. (Please note nearest field office contact information in comments section below.)	☑ Yes ☐ No ☐ NA

<sup>&</sup>lt;sup>1</sup> Oil discharges that result from natural disasters, acts of war, or terrorism are not included in this determination. The gallon amount(s) specified (either 1,000 or 42) refers to the amount of oil that actually reaches navigable waters or adjoining shorelines not the total amount of oil spilled. The entire volume of the discharge is oil for this determination.

<sup>2</sup> An owner/operator who self-certifies a Tier II SPCC Plan may not include any environmentally equivalent alternatives or secondary containment

impracticability determinations unless reviewed and certified by a PE.

<sup>11</sup> This provision does not apply to oil-filled manufacturing equipment (flow-through process)
12 Oil discharges that result from natural disasters, acts of war, or terrorism are not included in this determination. The gallon amount(s) specified (either 1,000 or 42) refers to the amount of oil that actually reaches navigable waters or adjoining shorelines not the total amount of oil spilled. The entire volume of the discharge is oil for this determination.

ONSHORE O	IL PRODUCTION FACILITIES—40 CFR 112.9 NA	PLAN	FIELD			
(Drilling and workover facilities are excluded from the requirements of §112.9)  Production facility means all structures (including but not limited to wells, platforms, or storage facilities), piping (including but not limited to flowlines or intra-facility gathering lines), or equipment (including but not limited to workover equipment, separation equipment, or auxiliary non-transportation-related equipment) used in the production, extraction, recovery, lifting, stabilization, separation or treating of oil (including condensate), or associated storage or measurement, and is located in an oil or gas field, at a facility. This definition governs whether such structures, piping, or equipment are subject to a specific section of this part.						
112.9(b) Oil Pro	oduction Facility Drainage	Proposition of the second	on Half			
(1)	At tank batteries, separation and treating areas where there is a reasonable possibility of a discharge as described in §112.1(b), drains for dikes or equivalent measures are closed and sealed except when draining uncontaminated rainwater. Accumulated oil on the rainwater is removed and then returned to storage or disposed of in accordance with legally approved methods	Yes No M NA	☐ Yes ☐ No ☑ NA			
	Prior to drainage, diked area inspected and action taken as provided below:

## ATTACHMENT A: SPCC FIELD INSPECTION AND PLAN REVIEW TABLE

**Documentation of Field Observations for Containers and Associated Requirements** 

Inspectors should use this table to document observations of containers as needed.

### **Containers and Piping**

Check containers for leaks, specifically looking for: drip marks, discoloration of tanks, puddles containing spilled or leaked material, corrosion, cracks, and localized dead vegetation, and standards/specifications of construction.

Check aboveground container foundation for: cracks, discoloration, and puddles containing spilled or leaked material, settling, gaps between container and foundation, and damage caused by vegetation roots.

Check all piping for: droplets of stored material, discoloration, corrosion, bowing of pipe between supports, evidence of stored material seepage from valves or seals, evidence of leaks, and localized dead vegetation. For all aboveground piping, include the general condition of flange joints, valve glands and bodies, drip pans, pipe supports, bleeder and gauge valves, and other such items (Document in comments section of §112.9(d).)

### Secondary Containment (Active and Passive)

Check secondary containment for: containment system (including walls and floor) ability to contain oil such that oil will not escape the containment system before cleanup occurs, proper sizing, cracks, discoloration, presence of spilled or leaked material (standing liquid), erosion, corrosion, penetrations in the containment system, and valve conditions.

Check dike or berm systems for: level of precipitation in dike/available capacity, operational status of drainage valves (closed), dike or berm impermeability, debris, erosion, impermeability of the earthen floor/walls of diked area, and location/status of pipes, inlets, drainage around and beneath containers, presence of oil discharges within diked areas.

Check drainage systems for: an accumulation of oil that may have resulted from any small discharge, including field drainage systems (such as drainage ditches or road ditches), and oil traps, sumps, or skimmers. Ensure any accumulations of oil have been promptly removed.

Check retention and drainage ponds for: erosion, available capacity, presence of spilled or leaked material, debris, and stressed vegetation.

Check active measures (countermeasures) for: amount indicated in plan is available and appropriate; deployment procedures are realistic; material is located so that they are readily available; efficacy of discharge detection; availability of personnel and training, appropriateness of measures to prevent a discharge as described in §112.1(b). Note that appropriate evaluation and consideration must be given to the any use of active measures at an unmanned oil production facility.

(c)(5)(i)	In lieu of having sized secondary containment, flow-through process vessels and associated components visually inspected and/or tested periodically and on a regular schedule for conditions that could result in a discharge as described in §112.1(b)			✓
(c)(6)(ii)	In lieu of having sized secondary containment, produced water containers and associated piping are visually inspected and/or tested for leaks, corrosion, or other conditions that could lead to a discharge as described in §112.1(b) in accordance with good engineering practice			☑
(d)(1)	All aboveground valves and piping associated with transfer operations are regularly inspected		Ø	
(d)(2)	Saltwater disposal facilities inspected often to detect possible system upsets capable of causing a discharge			Ø
(d)(4)(ii)	For flowlines and intra-facility gathering lines without secondary containment, in accordance with §112.7(c), lines are visually inspected and/or tested periodically and on a regular schedule to allow implementing the part 109 contingency plan or the FRP submitted under §112.20			. ✓

## ATTACHMENT C: SPCC CONTINGENCY PLAN REVIEW CHECKLIST

**☑** NA

40 CFR Part 109-Criteria for State, Local and Regional Oil Removal Contingency Plans

If SPCC Plan includes an impracticability determination for secondary containment in accordance with §112.7(d), the facility owner/operator is required to provide an oil spill contingency plan following 40 CFR part 109, unless he or she has submitted a FRP under §112.20. An oil spill contingency plan may also be developed, unless the facility owner/operator has submitted a FRP under §112.20 as one of the required alternatives to general secondary containment for qualified oil filled operational equipment in accordance with §112.7(k).

109.5-	Development and implementation criteria for State, local and regional oil removal contingency plans 17	Yes	No		
(a)	Definition of the authorities, responsibilities and duties of all persons, organizations or agencies which are to be involved in planning or directing oil removal operations.				
(b)	Establishment of notification procedures for the purpose of early detection and timely notification of an oil discharge including:				
(1)	The identification of critical water use areas to facilitate the reporting of and response to oil discharges.				
(2)	A current list of names, telephone numbers and addresses of the responsible persons (with alternates) and organizations to be notified when an oil discharge is discovered.				
(3)	Provisions for access to a reliable communications system for timely notification of an oil discharge, and the capability of interconnection with the communications systems established under related oil removal contingency plans, particularly State and National plans (e.g., National Contingency Plan (NCP)).				
(4)	An established, prearranged procedure for requesting assistance during a major disaster or when the situation exceeds the response capability of the State, local or regional authority.				
(c)	Provisions to assure that full resource capability is known and can be committed during an oil discharge situation including:				
(1)	The identification and inventory of applicable equipment, materials and supplies which are available locally and regionally.				
(2)	An estimate of the equipment, materials and supplies that would be required to remove the maximum oil discharge to be anticipated.				
(3)	Development of agreements and arrangements in advance of an oil discharge for the acquisition of equipment, materials and supplies to be used in responding to such a discharge.				
(d)	Provisions for well defined and specific actions to be taken after discovery and notification of an oil discharge including:				
(1)	Specification of an oil discharge response operating team consisting of trained, prepared and available operating personnel.				
(2)	Pre-designation of a properly qualified oil discharge response coordinator who is charged with the responsibility and delegated commensurate authority for directing and coordinating response operations and who knows how to request assistance from Federal authorities operating under existing national and regional contingency plans.				
(3)	A preplanned location for an oil discharge response operations center and a reliable communications system for directing the coordinated overall response operations.				
(4)	Provisions for varying degrees of response effort depending on the severity of the oil discharge.				
(5)					
(e)	Specific and well defined procedures to facilitate recovery of damages and enforcement measures as provided for by State and local statutes and ordinances.				

<sup>17</sup> The contingency plan should be consistent with all applicable state and local plans, Area Contingency Plans, and the NCP.

## ATTACHMENT D: TIER II QUALIFIED FACILITY CHECKLIST

**☑** NA

TIER II QUALIF	FIED FACILITY PLAN REQUIREMENTS —40 CFR 112.6(b)					
112.6(b)(1)	Plan Certification: Owner/operator certified in the Plan that:	☐ Yes ☐ No				
(i)	He or she is familiar with the requirements of 40 CFR part 112	☐ Yes ☐ No ☐ NA				
(ii)	He or she has visited and examined the facility <sup>18</sup>	☐ Yes ☐ No ☐ NA				
(iii)	The Plan has been prepared in accordance with accepted and sound industry practices and standards and with the requirements of this part					
(iv)	Procedures for required inspections and testing have been established	☐ Yes ☐ No ☐ NA				
(v)	He or she will fully implement the Plan	☐ Yes ☐ No ☐ NA				
(vi)	The facility meets the qualification criteria set forth under §112.3(g)(2)	☐ Yes ☐ No ☐ NA				
(vii)	The Plan does not deviate from any requirements as allowed by §§112.7(a)(2) and 112.7(d), except as described under §112.6(b)(3)(i) or (ii)	Yes No NA				
(viii)	The Plan and individual(s) responsible for implementing the Plan have the full approval of management and the facility owner or operator has committed the necessary resources to fully implement the Plan.	Yes No NA				
112.6(b)(2)	<b>Technical Amendments:</b> The owner/operator self-certified the Plan's technical amendments for a change in facility design, construction, operation, or maintenance that affected potential for a §112.1(b) discharge	☐ Yes ☐ No ☐ NA				
If YES	<ul> <li>Certification of technical amendments is in accordance with the self-certification provisions of §112.6(b)(1).</li> </ul>	☐ Yes ☐ No ☐ NA				
(i)	A PE certified a portion of the Plan (i.e., Plan is informally referred to as a hybrid Plan)	☐ Yes ☐ No ☐ NA				
If YES	The PE also certified technical amendments that affect the PE certified portion of the Plan as required under §112.6(b)(4)(ii)	☐ Yes ☐ No ☐ NA				
(ii)	The aggregate aboveground oil storage capacity increased to more than 10,000 U.S. gallons as a result of the change	☐ Yes ☐ No ☐ NA				
If YES	The facility no longer meets the Tier II qualifying criteria in §112.3(g)(2) bec it exceeds 10,000 U.S. gallons in aggregate aboveground storage capaci					
	The owner/operator prepared and implemented a Plan within 6 months following the change	☐ Yes ☐ No ☐ NA				
440.0(1)(0)	and had it certified by a PE under §112.3(d)					
112.6(b)(3)	Plan Deviations: Does the Plan include environmentally equivalent alternative methods or impracticability determinations for secondary containment?	Yes No NA				
If YES	Identify the alternatives in the hybrid Plan:  • Environmental equivalent alternative method(s) allowed under §112.7(a)(2);	☐Yes ☐ No ☐ NA				
	Impracticability determination under §112.7(d)	Yes No NA				
112.6(b)(4)	<ul> <li>For each environmentally equivalent measure, the Plan is accompanied by a written statement by the PE that describes: the reason for nonconformance, the alternative measure, and how it offers equivalent environmental protection in accordance with §112.7(a)(2);</li> </ul>	☐ Yes ☐ No ☐ NA				
	<ul> <li>For each secondary containment impracticability determination, the Plan explains the reason for the impracticability determination and provides the alternative measures to secondary containment required in §112.7(d)</li> </ul>	Yes No NA				
/:>	AND	* *				
(i) (A)	PE certifies in the Plan that:  He/she is familiar with the requirements of 40 CFR Part 112	☐ Yes ☐ No ☐ NA				
(B)	He/she or a representative agent has visited and examined the facility	Yes No NA				
(C)	The alternative method of environmental equivalence in accordance with §112.7(a)(2) or the determination of impracticability and alternative measures in accordance with §112.7(d) is consistent with good engineering practice, including consideration of applicable industry standards, and with the requirements of 40 CFR Part 112.	Yes No NA				
Comments:	Statistics, and the requisitions of the statistics.	* 1				

<sup>&</sup>lt;sup>18</sup> Note that only the person certifying the Plan can make the site visit

### ATTACHMENT E: ADDITIONAL COMMENTS

FROM INTERVIEW WITH TIM PARKER AND LOGAN ALLEN:

THERE IS NO GLYCOL USED AT THE SITE, AND NO H2S PRODUCED.

BRINE BLEEDS MAY BE SOURCE OF ODORS.

ORANGE SOLVENT USED FOR CLEANING, DIESEL EXHAUST. COMPLAINTS ARE MADE DUE TO THE ORANGE SMELL, HAVE BEEN MADE WITH STRAWBERRY AND CHERRY SCENTS.

ESPERANZA HOMES ACROSS THE STREET HAS BEEN THE SOURCE OF COMPLAINTS; OWNER OF 6 BUILDINGS WHERE STUDENTS LIVE HAS NO PROBLEMS WITH FACILITY, AND HAS HEARD NOTHING FROM STUDENTS.

APPROXIMATELY 80 BBLS OF CRUDE A DAY PRODUCED - 98-99% WATER IS BROUGHT UP.

OIL GOES OUT BY CRIMSON PIPELINE - SOLD TO PLAINS.

WELLS ARE 4500 - 5000' "DEEP" (NOT STRAIGHT DOWN)

1 WATER INJECTION WELL

ACTIVE OIL WELLS ARE #1,2,4,6,8,9,10,14,17, & 15-1 - WELL #19 WAS TESTED, THEN IDLED

AB 1960 TESTING (PERFORMED BY API 653 QUALIFIED/CERTIFIED INSPECTOR)

BRINE TANK #1 - 12/14/2012

INJ. WATER TANK #2 - 12/14/2012

INJ. WATER TANK #3 - 12/13/2012

CRUDE OIL #4 - 12/13/2012

CRUDE OIL #5 - 12/14/2012

CRUDE OIL #6 - 12/14/2012
